**DETAILED ACTION**

1. Claims 8, 12, and 13 are allowed.
2. Independent claim 8 recites "...a second frequency divider connected to an first input of a second combiner device, a second input of the second combiner device is connected to the output of the phase detector, an output of the second combiner device is communicatively connected to the VCO, and wherein the second divider device comprises a phase detector section and has a transfer function with said zero..." which is a feature that is not anticipated nor obvious over the art of record.

Independent claim 12 recites "...a device having a transfer function with a zero has a first input connected to said delta-sigma modulator and a second input connected to the output of the frequency divider..." which is a feature that is not anticipated nor obvious over the art for record.

Independent claim 13 recites "... a device with a transfer function as specified, said device with a transfer function equal to the function as specified with a device input Connected to the output of the oscillator, said device having a transfer function with a zero further comprising: a combiner device with: a first combiner input connected to the output of the device with a transfer function as specified a second combiner input connected to the input of the device with a specified transfer function, and a combiner output connected to the input of the frequency divider device..." which are features that are not anticipated nor obvious over the art or record.
